We are Better Together

When appropriately spaced, each unit in a Bouquet receives a boost from Flower Turbines' proprietary *Bouquet Effect*.

Enter any number of turbines below to see how each model increases in efficiency at various wind speeds.

*Wind Speeds are provided in Meters Per Second (M/S) as well as Miles Per Hour (MPH).

Bouquet Effect Calculator

Enter a number of turbines from 1-10 in the box below to get the output **per turbine** when properly positioned in a bouquet, then click calculate. Multiply the number of turbines by the calculated output to get total electricity generated.

The figures listed in the following chart are based on field testing of up to 5 turbines. Any numbers thereafter are projections.

Number of Turbines:

1

Calculate

Output Power in **Watts** per **Hour**

M/S	MPH	Small	Medium	Large
0.00	0.0	0.0	0.0	0.0
0.50	1.1	0.0	0.0	0.4
1.00	2.2	0.0	0.4	3.1
1.50	3.4	0.1	1.2	10.5
2.00	4.5	0.3	2.9	25.0
2.50	5.6	0.6	5.6	48.8
