

Miscellaneous Policies and Procedures

Flower Turbines

PAYMENT

Payment is by ACH or wire transfer after invoice. If we send an invoice by Wise, that is also an acceptable method of payment. Credit cards are generally accepted only on our self-service US online shopping page.

Unless other arrangements are made, we operate only by a single initial payment. If we accept a 75% deposit, there will be a surcharge of 20% on the total, and higher for lower initial amounts. We hope you understand that if we have to deal with partial payments and increase our accounting costs and borrow money to fulfill your order, we will have to charge a higher margin.

Shipping is not included in the product price. You can arrange shipping yourself or we will arrange it for you. If we do, advance payment is required to release the goods.

Unless we have a local distributor or production, we usually require a minimum order of \$10,000 and a quantity of at least 10 small units or 5 of our larger sizes for orders outside the EU and North America, unless other arrangements are made.

DELIVERY

If you are ordering products for your residence, you should know that many services will decline delivery of large goods to a place that lacks a loading dock. In addition, a delivery truck may not be able to maneuver in a residential parking lot to make a delivery. That means their only delivery may be curbside. Customers are advised to confirm delivery access requirements with their sales consultant and determine whether delivery should be made to the installation address, installer, or an alternative commercial location. Customers are responsible for ensuring adequate site access and unloading capability at the delivery location, including forklifts, lifting equipment, or additional labour where required.

A great workaround is to arrange for delivery to your contractor or installer. Forklifts or jacks may be required for safe unloading. Turbines that are 2-meter size and larger require forklift extensions for proper handling; this is a mandatory requirement. Without these extensions, the pallet may become unstable, resulting in damage to the turbine and blades. 1-meter size turbines can often be handled without specialized equipment but you should have a professional receive them and carry them with standard carrying and lifting precautions.

All delivery terms are EXW (ex-works) unless otherwise arranged. That means it is up to the customer to arrange shipment from the factory. If you want us to arrange shipment,

we will give you our best estimate plus a labor fee, and we will require payment of this before release of goods. The customer is responsible for any tariffs and fees. We recommend that you insure the package.

Flower Turbines provides logistics coordination, freight administration, supplier coordination, customs documentation assistance, and shipment management services. A flat logistics coordination fee of \$150 applies to shipments up to \$2,000, with an additional 2% fee for amounts exceeding \$2,000.

All freight quotations are provided as a courtesy based on third-party carrier pricing, availability, exchange rates, and estimated transit times applicable at the time of quoting. Freight rates, surcharges, and carrier availability remain subject to change prior to final booking confirmation.

Where shipment arrangements are coordinated on behalf of the customer, Flower Turbines acts solely as a shipping coordinator and is not the transport provider or carrier. A shipping coordination and administration fee applies when shipment arrangements are managed on behalf of the customer, unless otherwise agreed in writing.

Cargo insurance is not included unless specifically requested and approved in writing. Insurance will be quoted separately as an additional cost together with the freight quotation. Customers are strongly advised to insure all shipments. Failure to obtain cargo insurance is entirely at the customer's own risk. Flower Turbines shall not be held liable for any loss, theft, damage, delay, storage charges, customs-related issue, or transit-related claim occurring after handover to the freight carrier.

Any delivery dates or transit times provided are estimates only and are not guaranteed.

Installation Responsibility

Installation is not included in the price unless explicitly stated in writing. Customers are responsible for arranging qualified installers and ensuring all local codes, permits, and safety requirements are met.

We recommend working with licensed professionals familiar with wind or rooftop installations. It is the customer's responsibility to engage a civil engineer for his project.

We undertake no liability for the installation.

Permits and Compliance

Customers are responsible for obtaining any required permits, approvals, or permissions prior to installation. This may include:

- Building permits
- Zoning approvals
- HOA or property management approvals

We are not responsible for delays or costs related to permitting.

Site Suitability

Customers are responsible for ensuring that their site is suitable for installation, including:

- Structural integrity (roofs, mounting areas)
- Adequate wind resource
- Safe and/or limited access for installation and maintenance

We are happy to provide guidance, but final responsibility lies with the customer.

Performance Expectations

Energy production varies based on location, wind conditions, installation quality, and surrounding structures.

Any projections or estimates provided on our website are indicative only. There is no guarantee as to the wind speed and variability in your place of installation, no guarantee of ROI, and no guarantee of suitability. Energy and electricity are complex and multifactorial.

Warranty & Damage During Handling

Our warranty covers manufacturing defects only. See the separate full warranty document. Liability is limited to purchase price.

Damage caused by:

- Improper handling
- Incorrect unloading
- Improper installation
- Use of incorrect equipment

is not covered under warranty.

Lead Times

Estimated lead times are provided as guidance only and may vary due to:

- Manufacturing schedules
- Supply chain conditions
- Shipping logistics

We will communicate updates as they arise. A wait of 1-3 months is typical. Certain orders may depend on our putting together a minimum quantity for our suppliers.

Returns

Contact us for any possible returns. Do not return any merchandise until we approve the return and the location of return in writing. Returns are accepted only for damage or dysfunction and if it is impossible to replace or fix defective parts. Defects noticed must be communicated within 15 days of delivery.
